

Digbee achieves international certification for quality and information security management

For immediate release: Thursday 3 March 2022

- Digbee Ltd receives ISO 9001:2015 for quality management
- Digbee Ltd receives ISO 27001:2017 certification for information security management
- Charmwood Risk Management Ltd support Digbee through a successful ISO process

Digbee are proud to announce their successful certification to two internationally recognised standards that ensure all products and services meet the information security and quality needs of their customers. Aligning business processes to both ISO 27001:2017 and ISO 9001:2015 demonstrates the company's commitment to data protection, management processes and quality assurance.

ISO 9001 is seen by many as a bedrock standard as it promotes consistent quality of services and products to customers with an emphasis on continual improvement. Achieving ISO 9001:2015 certification shows that Digbee products and services meet the statutory and regulatory requirements of all customers, with a robust and sense checked quality management system.

ISO 27001:2017 certification, meanwhile, focuses on information security, a top priority for any global technology platform. Digbee spent a year developing its information security management system with the help and guidance of Charmwood Risk Management Ltd, who helped Digbee to identify risks, implement controls and improve information security processes.

Anthony Matthews, Managing Director at Charmwood Risk Management commented:

"We have worked alongside Digbee from early 2021 as they adjusted their business systems to align with both internationally recognised standards 9001 & 27001. We are proud of being part of their journey and seeing them achieve UKAS Accredited Certification to both standards simultaneously with almost no non-conformities identified - this is a wonderful achievement and sets the tone for a robust and successful integrated business management system going forward."

Jamie Strauss, Founder and CEO at Digbee continued:

"Our value to the mining community comes from providing a rigorous independent assessment of ESG activities through a fit for purpose product. It is only right that we put ourselves through a similarly rigorous process to safeguard our customers. We achieved ISO certification within one year with a fantastic final audit result. Having integrated the requirements of ISO and taken on board the best practice suggested by Charmwood, we look forward to continually improving our business processes to maintain the high expectations of our customers and stakeholders."

ENDS

Digbee is a technology company that builds solutions for the mining industry. We want to mitigate risk, improve transparency and foster a stronger and better global mining community for all. Our overriding mission is to make mining better.
